

State Committee Discussion Record

Program: Agriculture Risk Program and Price Loss Program (ARC/PLC) **Date:** 05.28.26

Staff Member Presenting: Doug Andresen, Farm Program Specialist

Matter for Consideration: Review and determine missing ARC-CO yields

Background: The National Office has asked State Committees to update missing yields by county for Crop Year 2025. Crops included are barley, chickpeas lg, canola, dry peas, oats, and wheat. The information for review can be found in Exhibit 1.

- For ARC-CO the 2025 county yield is computed and used where the farm tract is physically located:
 - ❖ To calculate a current year ARC-CO revenue loss, if applicable.
 - ❖ As the 2025 county benchmark yield to establish ARC-CO benchmark and guarantee revenues.

The 2025 county yields for the 22 covered commodities are used for the ARC-CO and ARC-IC programs and have been compiled using Risk Management Agency (RMA) and National Agricultural Statistics Service (NASS) data when available.

However, there are instances when the 2025 county yields are not available from RMA or NASS. In those instances, State Committee's (STC's) are required to research and establish 2025 yields for the counties missing yield data.

1-ARCPLC policy:

134 Other Yield Information

A STC Calculated Yields where RMA or NASS County Yield Data is Missing or NASS County Yield Data is Not Representative

In certain situations, RMA or NASS county yield data is not available or NASS county yield data does not represent the actual county yield. In order to establish either the benchmark--* yield or actual year yield, STC's must establish a county yield(s) in any year where the yield was not attainable, using the best available information, such as:

- yields from a contiguous county
- NAP yields that were established for the covered commodity
- in cases where STC's cannot find supporting yield data, STC can request the local COC to provide information/documentation at the local level that can be submitted and reviewed by STC
- State or district level NASS data
- State yield data from contiguous States.

Note: Some counties and covered commodities have been designated as both an irrigated and non-irrigated county (HIP). For these counties, STC's are required to provide both irrigated and non-irrigated yields. For other counties and covered commodities, yields are not broken out between irrigated and non-irrigated practices and are designated as "All".

When completing the yield for each covered commodity and year, the State Office **must** provide the county yield (that is 100 percent of the county yield).

134 Other Yield Information

B Missing T-Yields

T-yields are used as the substitute yield for low yields in the benchmark years for ARC-CO and ARC-IC. FSA presently has T-yields that are the weighted T-yields from RMA for covered commodities that were insured in the applicable county in the applicable year. When the covered commodity did **not** have crop insurance in the county in the year in question, the STC will be requested to assign a NAP T-yield that covered commodity in that county.

STC will first assign the NAP T-yield for the covered commodity in that county, as applicable. For counties that have both IR and NI yield data, STC will determine a T-yield for both practices. In cases where STC did **not** determine a NAP T-yield for the covered commodity or county, STC must follow policy in 1-NAP to establish a NAP county-expected T-yield for that covered commodity and county.

T-yields computed according to the policy in 1-NAP and used solely in the ARC and PLC programs are **not** required to be loaded into NCT.

STC's will be contacted by the National Office in any year where a missing yield or T-yield is required to complete the ARC-CO or ARC-IC benchmark and/or actual revenue.

STC assigned yields for calculating payments:

- Year specific yields (2025) will be used to calculate 2025 payments by multiplying the Actual Yield (RMA, NASS, or STC) x the 2025 National Price.

State Name	County Name	Sub	Crop Name	Unit	ARC-CO Yield Designation	(county yield or 80% of T)	(county yield or 80% of T)	(county yield or 80% of T)	(county yield or 80% of T)	(county yield or 80% of T)

24.27	\$5.3000	\$128.63	\$110.62	\$12.86				
67.76	\$5.3000	\$359.13	\$308.85	\$35.91				
31.26	\$5.3000	\$165.68	\$142.48	\$16.57				

- The STC is completing 2025 yields, which will be used for the 2025 program year benchmark yield, using yields from 2019-2023
- The yields assigned to each crop, for each county, by the STC will be used as the county yield. Which will then be used to calculate the benchmark yield
- STC will also assign T-yields, if not already established by RMA.
- If needed 80% of the T-yield will be used as a substitute yield
- If the substitute yield is greater than the County Yield, the substitute yield will be used in the benchmark calculation (80% of T-yield)

Grain Sorghum					
Yield <u>1</u> /	90	40	75	80	99
ARC Substitute Yield <u>2</u> /	60	60	60	60	60
MYA Price <u>3</u> /	\$3.22	\$5.02	\$5.99	\$6.33	\$4.25
Reference Price <u>4</u> /	\$3.95	\$3.95	\$3.95	\$3.95	\$3.95

- The benchmark yield is calculated using the Olympic average for the 5 crop years preceding the year prior to the program year.
ie: 2025 program payments will use yields from 2019 – 2023

Action Requested: The State Committee will review the missing yields for each county, along with the applicable policies and supporting documentation, and determine the appropriate yield to be entered. It is recommended that the yields are approved as presented.

Established RMA Yield - Must Remain	
NASS Yield - STC has option to change
